PART 1: MY POLITICAL GOALS

1) Unite all young, primarily European-descended, radicals together online. Together, we will **destroy** the left/right divide. I am not here to merge the left and right ideologically. That's impossible. I am here to accelerate the process of merging them socially. They are already merging socially, and I will make a video essay on this sociological phenomenon. There is a claim, that anti-Semitism is bringing the far left and far right together. I redirect that to the real enemy: our tailored outrage algorithms. Having us all be divided is what stops real change. My exact strategy for ending echo-chambers is in my "WHY AND HOW WE MERGE THE ALGORITHMS FOREVER" video. On an individual level, not institutional, we should be able to work in unison toward shared, select goals. My channel can be the first domino, that makes the rest of the dominoes fall. Merging the algorithmic suggestions in our feeds serves as the catalyst for greater political action. Like Eron Gjoni, the Albanian-American who broke up with his girlfriend Zoe Quinn, and spurred off GamerGate by doing so. He ushered in the second era of the internet, I too, will help usher in a new era of internet history.

2) I have an idea, for this greater political action. It is up to my audience as to whether they want to partake in it. A fight against further technological progress. This affects all of us and would benefit mankind in both the short and the long term. Together, we can fight against generative ai from both the right and the left, through talking points about deepfake pornography. Leftists hate deepfake pornography of women because it's sexist. Right-wingers hate it because it's degenerate. Banning generative AI is easily feasible within our lifetime. We must focus on one concrete goal at a time, THEN move on to the next one.

It is true, that banning generative AI is a reformist action that could be reversed by governments in the future. After all, I'm an anarchist, not a reformist. It's not about the legal impact of what we accomplish, but the change in mainstream discourse we create to get there.

Imagine my well-educated, beautiful, empathetic, European descended audience on the news. The reporters ask us "So, what is your underlying philosophy for being against deepfake porn?" and we all respond differently. Many are interviewed deeply, and questions about the validity of the state, of capitalism, of our current sexual culture, etc... become commonplace. If the mainstream discussion becomes "Is the state legitimate?" "Is it true, that technological progress is ruining our lives?" "Is sex work just another manifestation of the horrors of capitalism?" "Who *really* owns the pornography industry?"

Through this 'fight' against technological progress, actual revolutionary or insurrectionary consciousness will spread. If these conversations become commonplace, the material conditions will take care of themselves.

This channel is dedicated to goal 1.

PART 2: PLANS FOR THIS CHANNEL MOVING FORWARD

Part 1 of Goal 1: Content Promotion Strategy

By this point, I have exhausted or mostly exhausted my premade supply of video essays to publish on Youtube. I'll continue uploading what I have left. My goal is to ensure that each video brings unique insight, so I am not going to upload slop. This means I am reducing my upload frequency for the video essays while still growing this channel by appearing as a call-in guest on various shows, going on

podcasts, and going on twitter spaces. I'll likely debate others, in addition to doing discussions and interviews. I am going to upload all guest appearances I make on my channel, in the form of compilations. My goal is to upload longer and better video essays, above 20 minutes in length, so I'm aiming for once a month upload frequency for that type of video. The higher quality my video essays are, the more interviews and appearances I get. It all feeds back into itself. However, if I have an essay of quality I really want to write and put out there, then I'll still post it regardless. Expect 1 serious, long video essay a month with more experimental political content uploaded in between.

Meaning: I am going to upload YouTube shorts to keep this channel active, because I still need to give merging the algorithms my complete effort, even if the video essays that most help merge the algorithms take longer to make. In these YouTube shorts, I dish out my thoughts on various topics in a more relaxed manner than my video essays. And, I will experiment with more artistic forms of content (like edits) to help merge the algorithms. This way, you still get to enjoy my musings, but I'm not cluttering up my channel homepage with subpar video essays.

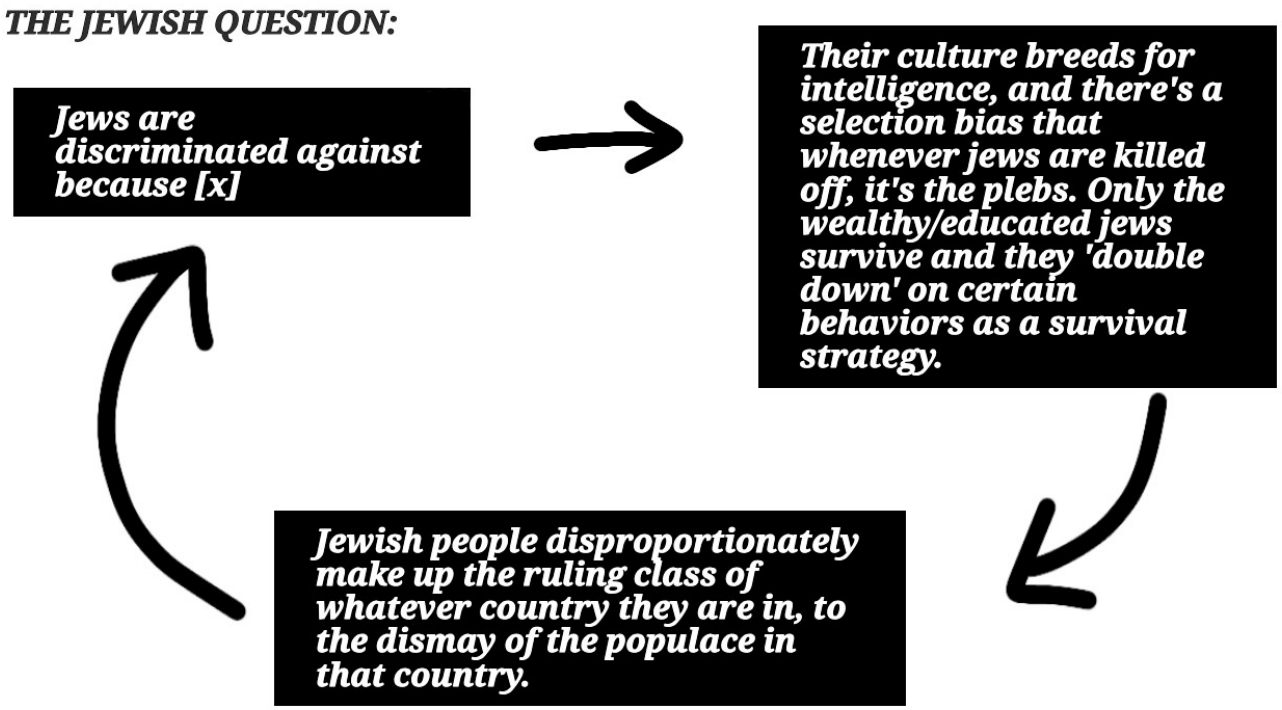
In addition to YouTube shorts, I am making a TIKTOK. Yes, I will become the villain of leftok, and they will enjoy it. I have noticed that my twitter feed leans right-wing, despite my active attempt to follow leftists. Making a TikTok account will be a good way of experiencing more left-wing echo-chambers. Twitter can be for my right-wing audience and for me to view right-wing content, whereas TikTok can be for my left-wing audience, and for me to view left-wing content. Tiktok has great reach, so I've decided this is the best platform to continue on with for merging the algorithms. Twitter and TikTok, along with YouTube, have the highest ROI, but YouTube will always be my main platform that the rest tie back into. A dedicated space for each echo-chamber, because the algorithmic recommendations of any social media website will almost always lean one way or another, despite your active, and worthwhile, attempts to diversify.

Lastly, I am going to organize my YouTube channel into playlists. I'll make a "START HERE" playlist for every newcomer to watch, that will include this video, my "WHY AND HOW WE MERGE THE ALGORITHMS FOREVER" video, my "WHY POLITICS HAS NO ANSWER" video, and one other I have planned. I'll further organize this channel into "VIDEO ESSAYS" and "APPEARANCES".

Part 2 of Goal 1: Intellectual Goals
I have two main intellectual goals for my life, since I've decided that I'm going to spend the next 15 years of my life dedicated to philosophy.

1) Answer the Jewish Question, with the entire history and with all nuance considered. The last time an anarchist addressed this was with Bakunin's attempt in the 1850's and 60's, and frankly, I think I can do a better job than some ancient fat sweaty Russian ephebophile. I have a HUGE JQ reading list that will take me quite a few years to get through.

In fact, I have a hypothesis on the Jewish Question. I have this chart. [Show it on screen and talk about it]



THE JEWISH QUESTION:
Jews are discriminated against because [x]
Their culture breeds for intelligence, and there's a selection bias that whenever jews are killed off, it's the plebs. Only the wealthy/educated jews survive and they 'double down' on certain behaviors as a survival strategy.
Jewish people disproportionately make up the ruling class of whatever country they are in, to the dismay of the populace in that country.

Expect a 5 hour long video essay on this in 7 years. This aligns with my broader life goal of studying philosophy, since I have to study the ancient Greeks, the Bible, and more history first as a foundation in order to continue studying the rest of the Western line of philosophy.

2) Destroy Peter Thiel with facts and logic. When I get bored of reading religious texts, I'll read NRx texts but also other philosophical influences of Peter Thiel, like that of Rene Girard, a Christian who wrote about scapegoating and mimetics. This goal should be easier to accomplish. Expect a video on this a couple years sooner than the JQ video.

Completing these will help me merge the algorithms, and subsequently my political goals. The better the video essays, the more interviews I'll get. When I achieve 30k subs through doing this, I am going to launch the imageboard once I poll you all for your willingness to actually use it. Remember, we only need 4000 dedicated algorithm mergers to change politics forever.

I hope you will all have as much fun witnessing this project grow as I will growing it! Don't forget to share this video to help merge the algorithms <3
